# LEAD FREE WATER HOSE

The Australian Building Codes Board (ABCB) have decided to limit the allowable lead content in plumbing products, which contain copper alloys and intended to be in contact with drinking water. From 1 May 2026, plumbing technicians cannot install products with a lead content of more than 0.25%. As leaders in the expertise and supply of plumbing and gas products in Australia for more than forty-five years, Bromic is transitioning early to allow suppliers and plumbers to be up to date. The brass fittings featured in our water hose connections will transition to Lead Free: Complying with Volume Three Plumbing Code of Australia 2022 ASG4 (2)(a) weighted average lead content of not more than 0.25%. The product codes for these will transition to -1 versions, details of which are listed in the table.
